

FORM / SPECIAL PRESSES

We produce many different types of special presses:

- Form presses
- Presses for rubber
- Presses for plastic
- Presses for laboratories
- Presses after customer's specification

Each press is built up with individual control system, but the hydraulic system is built as one big system for all presses.

In the above photo the handling of the items/chairs is made by robots, which take the item/chair out of the form from the backside.
